

Dashboard ► Full Stack Web Development 4.0 ► AJAX v4.0 ► Day 1 | Classwork ► Intermediate

Intermediate

Intermediate Exercise | XML

In this example you should create an XML file which will contain data about your favorite songs. You should provide at least 20 songs with this data: title, artist, country, genre, year.

Intermediate Exercise | AJAX XML

Now use the XML file that you have created in the previous example and load it into the HTML page using AJAX. You should create a nice template using Bootstrap. Be creative! :)
