Basic

Basic Exercise | Warm up questions

Discuss the following questions with your pair-partner:

- What is AJAX?
- What is Web 2.0, how many Web 2.0 websites do you know?
- Could you explain the AJAX workflow?
- What is the XMLHttpRequest object responsible for?
- Could you compare XML and JSON data formats?

Basic Exercise | AJAX - txt

After the warm up questions we will do some warm up exercises. :) Create one txt file and insert some content into it. Now, using the XMLHttpRequest object load this content to the page when the user clicks on the button.

When you finish with this part, go through all code lines and explain it to your partner. After this try to write the same code from scratch without using any help material with your pair-partner. How far can you go?
